

What To Expect To Pay For A Business VoIP Phone System *(And The Features Included!)*

THE BASICS

THE BASICS

Right now, many businesses have a phone system that just isn't cutting it...

Whether it's costing too much, dropping calls, or you're getting poor service from your provider, many businesses are in the market for a new phone system.

The problem is... choosing the right phone solution is no easy task.

With so many options out there, it can be quite difficult to know which system is the right fit for your companies' budget and specific requirements.

Many businesses make the mistake of being 'sold' on a solution because of the price, but find out later down the road they aren't getting quite what they expected...

I've written this report to make sure that doesn't happen to you.

I'll show you the different pricing models, what to expect to pay, and what should be included in the price.

THE BASICS

SO WHAT IS VOIP? (VOICE OVER INTERNET PROTOCOL)

In the simplest terms, a VoIP phone system allows you to make and receive calls over the internet, rather than through a traditional phone line.

VoIP systems can run through any eligible handset, and even your mobile phone or tablet!

VoIP comes with a range of benefits and can save you money by utilizing your pre-existing internet connection.

Business communications have changed dramatically over the years, and forward-thinking companies are now making the switch from traditional landlines to VoIP systems.

So, let's talk a little bit about the benefits it offers and how much it will likely cost...

VoIP Phone Systems: The Features

THE FEATURES:

LOW STARTUP COSTS

One key selling feature of VoIP phone systems is Cloud PBX (private branch exchange). With cloud PBX, your phone, computer, and even a smartphone running a VoIP app can connect to the same PBX. This means there is no need for expensive hardware or installations when setting up a VoIP phone system – which dramatically reduces your upfront costs.

CALL RECORDING

Call recording is something that many businesses don't think about when choosing a phone system. However, it can have many uses including sales training, and refreshing your memory on what was discussed on a past call

VoIP Phone Systems: The Features

THE FEATURES:

FREEDOM & FLEXIBILITY

Your phone system will no longer be tied to a physical location or even a specific phone. Thanks to a Mobile Application, you can download VoIP to any smart phone, log in with your credentials, and you're in business. This means you can turn multiple devices into your personalized phone. You can even utilize your tablet, laptop, or desktop to make calls.

You should also make sure unlimited calling and a local number is included in your VoIP package. Even if you aren't physically located in a certain geographic region, you can still get a local number for that specific area. This is great for companies with multiple offices or employees who are on the go.

VoIP Phone Systems: The Features

THE FEATURES:

NEVER MISS AN IMPORTANT CALL

You can also have calls ring multiple locations at once. For example, you can have it set up so it rings every member of your sales team simultaneously. You could even set up a priority sequence and have it ring one employee first, and if there is no answer, it begins ringing another employee, and so on.

VOICEMAIL TO EMAIL OR TEXT

With this feature, whenever a phone call is missed or goes to voicemail, you can automatically have the message translated to text and sent to you via email or an SMS text message. This feature is perfect for professionals who need to access their voicemails quickly on the go.

These are just a handful of features you want to have included in your VoIP package. There are many others including call waiting, hold & transfer, customizable music on hold, auto greeters, busy lamp field, option for a toll free number, and many more.

WHAT WILL IT COST YOU

WHAT WILL IT COST YOU?

So now that you've heard about the features offered with VoIP phone systems, you're probably wondering how much it's going to cost...

Although pricing can range greatly depending on the features you require, a general rule of thumb is paying anywhere from 30 to 75 dollars per month, per user.

POTENTIAL SAVINGS

We have been providing voice and data solutions to small and medium businesses for nearly 15 years.

In this time, we have found that 8/10 times we are able to provide organizations with a cheaper phone system than the one they are using, while also upgrading their features.

FREE VOIP DEMO!

HERE'S SOME GREAT NEWS – WE WILL GIVE YOU A ZERO OBLIGATION, ONE-TO-ONE PHONE DEMO – FOR FREE!

We've set aside some time to provide you with a Free VoIP Demo.

Whether your phone contract is coming up, you're having phone problems, you're frustrated with your current phone provider, or you just want to learn about your options, a phone demo is the best first step.

We can come to your office, you can come to ours, or we can even do it over the phone – whatever is most convenient for you.

We will break down the numbers for you and compare your old system with a new VoIP one.

And, we will show you exactly when and how you will start saving money if you switch over to a VoIP system.
